

BALA NIKHIL

Full Stack Developer | React Native | Node.js | AI-Powered Applications

✉ balanikhilnikhil@gmail.com 📞 +91-9110753008 🌐 github.com/nikhilbal 🌐 linkedin.com/in/bala-nikhil

Technical Skills

Languages: JavaScript, TypeScript, Python, C

Frontend: React.js, React Native, Expo, HTML5, CSS3, Tailwind CSS, Redux, Responsive UI

Backend: Node.js, Express.js, REST APIs, JWT Authentication, RBAC, API Integration

Databases: PostgreSQL, MongoDB, MySQL

Cloud & Tools: AWS EC2, S3, Lambda, IAM, Git, GitHub, Postman, VS Code, Figma

Data & AI: Pandas, NumPy, Machine Learning, K-Means Clustering, Streamlit

Other: Google Maps API, Socket.io, Payment Integration, IoT, Raspberry Pi

Experience

Software Development Engineer Intern

May 2025 – July 2025

Bluestock.in – Fintech IPO Platform

- Engineered fintech dashboard features for IPO listing and admin workflows.
- Designed and implemented a secure Admin Dashboard to manage IPO listings, users, approvals, and application status tracking.
- Implemented Role-Based Access Control using permission-based workflows, improving platform security and access control.
- Integrated REST APIs for real-time IPO data ingestion, internal analytics, and workflow automation.
- Automated verification and approval processes, improving admin efficiency by **30%**.
- Optimized frontend rendering and API request handling, reducing dashboard load time by **25%**.

Projects

PoolGo – AI-Powered Ride Sharing Mobile Application

GitHub

Tech Stack: React Native, Expo, Redux, Node.js, Express.js, PostgreSQL, Google Maps API

- Built a full-stack ride-sharing mobile application enabling ride creation, booking, real-time search, and intelligent ride matching.
- Implemented secure OTP-based authentication and scalable user flows for riders and drivers.
- Developed backend APIs for ride posting, booking management, location-based filtering, and dynamic ride discovery.
- Built driver KYC verification workflows for Driving License and Registration Certificate validation to improve user trust and safety.
- Integrated map-based ride suggestions and designed a modern mobile-first UI with reusable and scalable components.

Auto Smart Cart Billing System – IoT + Full Stack Platform

Live Demo

Tech Stack: React.js, Node.js, Express.js, Raspberry Pi, REST APIs, Payment Integration

- Architected a real-time IoT-enabled smart billing system integrating Raspberry Pi hardware with a scalable web application.
- Built a React.js frontend and Node.js backend to process cart events, calculate bills dynamically, and synchronize data in real time.
- Implemented secure UPI and card payment workflows with automated billing logic.
- Reduced manual checkout dependency and minimized billing errors through real-time cart automation.

Customer 360 Analytics Platform – Data Analytics & Machine Learning

Live Demo

Tech Stack: Python, Pandas, NumPy, K-Means Clustering, Streamlit

- Built an end-to-end Customer 360 analytics platform to unify customer interactions across multiple touchpoints.
- Developed data ingestion and processing pipelines using Python and Pandas for structured customer analysis.
- Implemented K-Means clustering for customer segmentation and churn behavior analysis.
- Created interactive Streamlit dashboards to visualize insights and support data-driven business decisions.

Education

Guru Nanak Institute of Technology, Hyderabad

2022 – 2026

Bachelor of Engineering in Electronics & Communication Engineering

CGPA: 8.1

NANO Junior College, Hyderabad

2020 – 2022

Intermediate – MPC

Score: 87%
